

Rebated door hinge FT-65KSS adjustment

Lowering the door leaf:

1. Loosen the upper set screws of the hinges with the hex key 1 counterclockwise - the door leaf will move down with its own weight.
2. Tighten the lower set screws clockwise.

Lifting the door leaf:

1. Using the hex key 1, turn the two lower set screws open by two turns.
1. Tighten the upper set screws equally on all hinges until the door leaf is at the desired height.
2. Tighten the lower set screws. Adjustment range $\pm 1.5\text{mm}$.

Moving the door leaf sideways:

1. Open the hex key 3 the stop screw clockwise by two turns.
2. By turning clockwise with a flat-tip screwdriver, the door leaf moves towards the hinges. By turning it counterclockwise, the door leaf moves towards the lock. Adjustment range $\pm 1.5\text{mm}$.
3. Tighten the stop screw.
